Add Layers to Your Security

Protecting your organization from cyberattacks is like protecting yourself from the cold. Like coats and gloves, cybersecurity knowledge and tools add multiple layers of protection between organizations like yours and cybercriminals. This presentation will provide details about why cybersecurity is important for organizations like yours and the basics of how to add layers to be better protected from cyberattacks.

OUTLINE:	
I.	Cybersecurity and why it is important
II.	People are the first line of defense
	Delta a midden and midden in an amount of the
III.	Policy guides security in an organization
IV.	Products are the tools that provide protection
